Press Release

Galvanon and Unibased Systems Architecture, Inc. to Deliver Patient Self-Service Scheduling, Check-In and Check-Out Solutions to the Health Care Industry

Chesterfield, MO., February 15, 2007: Unibased Systems Architecture, Inc. (USA), the leading provider of enterprise scheduling and surgery management solutions to the health care industry, and Galvanon, the patient experience company, today announced they have formed an alliance to provide patient self-service kiosks to the health care industry. Under the terms of the agreement, USA will offer Galvanon's MediKiosk™ and customer value management technology as an optional integrated feature of its #1 rated enterprise scheduling solutions.

Galvanon's MediKiosk is a free-standing kiosk with a touch-screen interface that automates patient registration and check-in processes. Using MediKiosk, patients can check in for appointments, obtain their patient agenda of scheduled services, verify registration information, electronically sign consent forms, make a co-payment and find their way in a facility. Galvanon's Customer Value Management Enterprise Server is the foundation of Galvanon's self-service applications, including the MediKiosk. The single, end-to-end platform allows users to manage information across an extended network, such as patient preferences and permissions. The software also helps health care organizations manage patient flow through patient encounter management features that enable front-desk personnel to view and manage checked-in patients, saving time and improving workflow.

"USA is committed to delivering solutions and services to improve patient safety, enhance quality of care and reduce administrative costs. This relationship will help our customers provide a better patient experience, streamline workflow by reducing check in time by 30% for new patients and by 50% for existing patients, improve safety through accurate patient identification, reduce duplicate data entry, enhance privacy and increase patient satisfaction," stated Barry M. Rundquist, USA's Chief Executive Officer. Rundquist adds, "Together, our solutions will enable our customers to build stronger patient relationships."

For Immediate Release: February 15, 2007

About Galvanon: Galvanon, a subsidiary of NCR Corporation, helps health care organizations enhance the patient experience at home, in the hospital and in the physician's office through innovative solutions such as kiosks, Web self-service applications and technology that streamlines everyday patient interactions and improves patient flow through the health care process. For more information about Galvanon, visit www.galvanon.com.

About Unibased Systems Architecture (USA): Celebrating its 20th anniversary this year, USA's reputation for product quality, reliability, and supporting services has no equal in the HIT industry. USA and its products have maintained highest rankings from the KLAS™ independent reporting for the last seven years. RMS is an integrated solution which schedules and tracks patient resource needs and utilization from pre-access through post procedure follow-up. ORMS is an integrated module which addresses OR scheduling, surgeon preferences, suite utilization, materials management, clinical worker training and certification. RMS/ORMS results in significant improvements in physician and patient relations. Visit USA on the web at www.unibased.com.
