## **Unibased Systems Architecture, Inc. Announces Physician Order Capture and Enterprise Tracking Module**

**Chesterfield, MO., February 16, 2009:** Unibased Systems Architecture, Inc. (USA) today announced a new web-based product aimed at improving convenience for physicians, increasing access management productivity, and electronically documenting physician orders for procedures. Physician Order Capture and Enterprise Tracking (POCET) addresses the major crisis facing today's healthcare environment by streamlining physician order capture for procedures and eliminating multiple phone calls, faxes and delays in gathering those orders and linking them to a specific encounter. POCET will capture, store, and link scanned, faxed, email or electronic orders for procedures to both patient and physician records. Orders will be stored as documents, which may be made immediately available to any authorized performing department, distributed to the enterprise document imaging and storage system, or stored indefinitely within USA's award winning ForSite2020® product suite.

POCET will be integrated with other USA web applications, including Physician Access (PA) and Consumer Access and Scheduling for Healthcare (CASH). The integrated enterprise fax server capability of ForSite2020® provides added flexibility to these existing web offerings.

Larry Grossman, USA's Vice President of Product Management and Marketing, stated, "POCET addresses an area of massive inefficiency and duplication of effort, which in many cases results in dissatisfied physicians and patients, as well as payment delays. The physician's order for a procedure is a key component to scheduling and registration, and an easily accessible audit trail is essential. The POCET roll-out will begin this spring within USA's client base, with several locations going live by late summer of 2009. In line with these times, Unibased is hopeful that this offering will stimulate more cash in the pockets of patients, physicians, and hospitals."

**About Unibased Systems Architecture (USA):** Celebrating its 22nd year in the HIT industry, USA's reputation for product quality, reliability, and supporting services has no equal. USA and its products have maintained highest rankings from the KLAS™ independent reporting for the last eight years. USA markets various products which are open, scalable, integrated client/server and web enabled solutions, designed to meet the unique needs of sophisticated enterprise

organizations. USA has major solution offerings in the HIT and air travel markets, providing real time production scheduling, human resource, security and financial systems. In the HIT industry, RMS is an integrated solution which schedules and tracks patient resource needs from pre-access through follow-up. RMS also monitors the effectiveness of clinical programs, financial productivity and capacity management. ORMS is an integrated module which addresses OR scheduling, surgeon preferences, suite utilization, materials management, clinical worker training and certification. RMS/ORMS results in significant improvements in physician and patient relations. The newest product, ForSite2020<sup>®</sup>, integrates both RMS and ORMS with the addition of a physician portal, consumer portal, automated order creation, a business intelligence offering, ForSite Analytics, and revenue cycle functions such as validation of patient demographics, patient's current insurance eligibility checking, assurance of medical necessity compliance, and estimation of the patient's out-of-pocket expense based upon scheduled and ordered services. USA products and services are available through direct sales, marketing partners, value added resellers and system integrators. USA is a private corporation founded in 1986, and is based in Chesterfield, Missouri. Visit USA on the web at [www.unibased.com](http://www.unibased.com) or contact::
