Unibased Systems Architecture, Inc. (USA) Announces Web-Based Application for Consumer Access and Scheduling for Healthcare (CASH)

Chesterfield, MO, June 16, 2008: Unibased Systems Architecture, Inc. has created and now offers a healthcare consumer sensitive web-based application integrated with its award winning enterprise-wide access management and scheduling products. The new product, Consumer Access and Scheduling for Healthcare (CASH) will be linked to USA's Resources Management System (RMS) or may be linked to any enterprise-based access management system. The CASH design incorporates Health Insurance Portability and Accountability Act (HIPAA) privacy and security, as well as sensitivity to the needs of the healthcare consumer.

According to John Dickens, USA's team leader for web-based applications, "The keys were to provide the patient with the utmost flexibility and clinical assistance to schedule services at the most convenient locations within the provider enterprise, while ensuring that economic and demographic data is current. CASH is designed to meet the needs of patients with busy lifestyles. Of course, the process is password protected, and clinical question "walk-throughs", similar to the RMS triage, are included. The patient can schedule single or multiple procedures without fear of conflicts and clinical warnings as appropriate. Confirmations are automatically handled through normal e-mail and/or automatic voice messaging. A nice feature is that, if the physician's order has not been presented at the time of confirmation, the patient is automatically reminded to bring the order with them or to contact their physicians. We expect that our client's patient satisfaction scores will improve, and the current workload at the physician offices and in access management and call center scheduling will be reduced. We supplement these features with side-bar components, such as physician referral tracking, and of course, complete facility control of available procedures."

About Unibased Systems Architecture (USA): Celebrating its 22nd year in the HIT industry, USA's reputation for product quality, reliability, and supporting services has no equal. USA and its products have maintained highest rankings from the KLASTM independent reporting for the last eight years. USA markets various products which are open, scalable, integrated client/server and web enabled solutions, designed to meet the unique needs of sophisticated enterprise organizations. USA has major solution offerings in the HIT and air travel markets, providing real time production

more

scheduling, human resource, security and financial systems. In the HIT industry, RMS is an integrated solution which schedules and tracks patient resource needs from pre-access through follow-up. RMS also monitors the effectiveness of clinical programs, financial productivity and capacity management. ORMS is an integrated module which addresses OR scheduling, surgeon preferences, suite utilization, materials management, clinical worker training and certification. RMS/ORMS results in significant improvements in physician and patient relations. USA products and services are available through direct sales, marketing partners, value added resellers and system integrators. USA is a private corporation founded in 1986, and is based in Chesterfield, Missouri. Visit USA on the web at www.unibased.com or contact:
