Press Release

Unibased Systems Architecture's New Sophisticated Insurance Crosswalk Solves Problem for Large IDNs

Chesterfield, MO., December 4, 2007: Unibased Systems Architecture, Inc. (USA), the leading provider of enterprise-wide resource management solutions and operating room management systems to the healthcare industry, today announced their newest software release, 6.15. The major feature of this newest enhancement to their application is a sophisticated insurance crosswalk that links disparate facilities insurance master files for ease of scheduler selection.

"USA continues to solve our toughest problems," said Buddy Gillespie, Vice President and CIO of WellSpan Health, an integrated delivery network serving the greater Adams-York County region of Pennsylvania. "When we told them we wanted the last known insurance from our patient's most recent encounter with our healthcare system to automatically populate their newest registration, USA committed to get that done for us. Upon further evaluation, together we discovered WellSpan does not always use the same identifier for the same insurance across all of our delivery locations. That made the job much more difficult, especially considering our 70+ service locations and integration with a multi-specialty physician group! However, they delivered on their promise in time for our initial go live event. They live up to their commitments."

"This was an opportunity for USA to demonstrate the breadth of our product" according to David White, Vice President, Application Development for USA. David added, "At WellSpan, using RMS, patients can register and be scheduled at any of the 70 or more WellSpan facilities, including collecting payer information, and subsequently be scheduled at another facility without having to restate, or revise insurance data. Our client is establishing a market milestone for patient convenience. RMS acts as a crosswalk and clearinghouse of insurance and registration data from disparate systems and maintains the information in USA's Enterprise Master Person Index (EMPI) based registration system. The issue is more complex than most would imagine, because insurance plan and code identification in a variety of different systems has a many-to-one, and one-to-many relationships which requires unique table logic."

About Unibased Systems Architecture (USA): Celebrating its 21st year in the HIT industry, USA's reputation for product quality, reliability, and supporting services has no equal. USA and its products have maintained highest rankings

For Immediate Release, December 4, 2007
