## **United Hospital System Selects Unibased Systems Architecture's Award Winning ORMS for Surgery Management Solution**

**Chesterfield, MO., September 23, 2008:** Unibased Systems Architecture, Inc. (USA) today announced that United Hospital System, Kenosha, Wisconsin, has contracted for its award-winning periOperative Resource Management System (ORMS). The initial focus of a phased implementation will be surgery scheduling with automation of preference cards, followed by use of USA's business intelligence tool, ForSite Analytics. USA's ORMS will replace McKesson's Orbit surgical scheduling system.

"Our KLAS ranking was a major reason expressed by United for considering USA and ORMS. Our high scores in implementation, client support and system reliability were critical factors in their selection. Because we have been able to maintain such high scores for five years in a row gave them a high degree of confidence that we could deliver on what we promise," said George Giorgianni, National Director for Perioperative Solutions for USA. Phil Amelung, Senior Sales Executive added, "The OR management team is looking forward to having information at their fingertips. Utilizing the statistics that are a by-product of scheduling will provide a better understanding of block utilization and case delay reasons and assist them in making important decisions driving efficiencies."

**About Unibased Systems Architecture (USA):** Celebrating its 22nd year in the HIT industry, USA's reputation for product quality, reliability, and supporting services has no equal. USA and its products have maintained highest rankings from the KLAS™ independent reporting for the last eight years. USA markets various products which are open, scalable, integrated client/server and web enabled solutions, designed to meet the unique needs of sophisticated enterprise organizations. USA has major solution offerings in the HIT and air travel markets, providing real time production scheduling, human resource, security and financial systems. In the HIT industry, RMS is an integrated solution which schedules and tracks patient resource needs from pre-access through follow-up. RMS also monitors the effectiveness of clinical programs, financial productivity and capacity management. ORMS is an integrated module which addresses OR scheduling, surgeon preferences, suite utilization, materials management, clinical worker training and certification. RMS/ORMS results in significant improvements in physician and patient relations. The newest product, ForSite2020®, integrates both RMS and ORMS with the addition of a physician portal, consumer portal, automated order creation, a
